**More Berries Per Bush,  
Greater Yields Per Acre,  
Better Profits  
for Growers**

- **Improve absorption of water and nutrients in blueberry grow media**
- **Eliminate problems associated with mold & bacteria in media**
- **Condition soil to allow moisture & nutrient retention around blueberry root zones**
- **Save money on water & nutrients**
- **INCREASE HARVEST YIELDS**

**Read Directions Before Use  
Keep Out Of Reach Of Children**

Pre-mixing of BERRY BOOST™ is NOT recommended. Product effectiveness can be affected. If pre-mixing is necessary, mix only enough for use within eight (8) hours. Mix Berry Boost™ with clean water for maximum utility.

*Putting & Keeping Water & Nutrients  
Where Your Blueberries Can Use Them!*

In Flo-Tec's on-going mission to understand and supply the needs of its agriculture customers, we do a lot of listening. Recently we have heard a lot about the challenges facing blueberry growers. The short seasons, often impacted by too few "chill" periods, have combined with the hydrophobic nature of various growing media to make it much more difficult to keep blueberries properly watered and fertilized. Substantial research led us to a new product mix that we felt could solve the problem while also significantly increasing harvest yields. In cooperation with a respected, large Florida blueberry producer, we conducted a year-long test of this new product.

Test results show a significantly positive impact on berry yield in the groups that were treated with Berry Boost. Overall yield was improved on average of 32.15% compared to the blueberry bushes in the untreated control group.

With two simple treatments - one after harvest and cut back, and the other to help initiate new growth after defoliation - Berry Boost can provide better yields while helping to save both water and fertilizer.

Apply Berry Boost at 4.5 gallons per planted acre, per treatment. If hand or can watering, dilute at 1:100.

Ask about other fine Flo-Tec products that improve productivity and help save you money and time!

BERRY BOOST™ is NOT an EPA registered pesticide.  
No claims are made for this product in that regard.
