

CELL Guard™

KEEPING WET WALLS WORKING

Preserve the Performance of Your Wet Wall Cooling Pads for Longer Life and Optimum Plant Health

The wet walls in your greenhouses are significant investments designed to maximize your production efficiency.

When they go down, or are working poorly due to clogging and restrictions in the passageways, your plants are jeopardized. Regardless of your water source, mineral deposits and biologicals are a given. Cell Guard™ from FLO-TEC was designed to target those deposits and keep the cells in your wall from plugging. It extends the life of your cells, promotes good air flow and helps to keep them working at peak effectiveness.

Cell Guard™ helps to provide the complete protection you need from both mineral and biologic contaminants. Call FLO-TEC today for more information.

CELL Guard™ Benefits

- ★ *Removes and controls mineral deposits and biologicals from wet wall water for plug-free operation*
- ★ *Prolongs and preserves clog-free air flow through wet wall pads*
- ★ *Improves wet wall efficiency - affordably*
- ★ *Reduces power costs*
- ★ *Helps provide complete protection from mineral and biological contaminants*
- ★ *Control is achieved with just 6.4 oz. per gallon of water. Available in 5, 30 & 55 gallon sizes*
